

Established in July 2006, UniSense Microsystems Technology Co., Ltd. is a MEMS design house, specializing in the various types of sensor devices including pressure, temperature, humidity and other physical sensors. The team members had got involved in related fields for more than 20 years.

Currently, UniSense is not only offering high quality sensors, but also providing related control and interface IC which are most cost-efficient and easy to use. The field of application is including consumer electronics, medical electrical products as well as automotive electronics.

In the future, UniSense will continuous to provide more precision, smarter sensor module to our partners, end product producers to help everyone lives in healthy and comfortable lifestyle.
